

SLIDING WALL

Our sliding wall systems can divide large openings without unsightly floor track. Our patented Raydoor Guiding System links each panel, allowing a whole system to be operated by moving just the lead panel

To divide an even wider opening, you can pair two systems and have them operate symmetrically. This symmetrical setup is also useful for reducing the thickness of a header by allowing for fewer rows of tracks.

Opening Width	Max Panel	Usage	Overlap	Clearance
54" to 288"	5x10 6x8	Med-High Frequency	None	Greater Than 65%
